NOTE 1: In gas phase or water solution.

NOTE 2: For *United States Pharmacopeia* (USP) quality verification, the verification tests must be performed in the following sequence: carbon monoxide, hydrogen sulfide, nitric oxide, nitrogen dioxide, ammonia, sulfur dioxide, water, percent purity, (after the filled cylinder has warmed to ambient temperature). A gas/liquid equilibrium must be established in the cylinder. For a "vapor" sample, test carbon dioxide from the vapor phase of the cylinder; for a "liquid" sample, arrange the cylinder so that when its valve is opened, a portion of the carbon dioxide liquid phase is released through a regulator or a piece of pressure tubing of sufficient length to allow all liquid to vaporize. See 5.1.7.

NOTE 3: Total sulfides in QVL H shall not exceed 0.5 ppm as hydrogen sulfide.

NOTE 4: Unless otherwise specified, the sample shall be obtained from the vapor phase of the container, or as agreed upon between the supplier and the customer.

NOTE 5: The last edition of G-6.2, 1973, listed 4 quality verification levels lettered A to D for gaseous and liquid carbon dioxide, and one quality verification level of solid carbon dioxide. These letter designations have been dropped from this edition (1985) since they no longer represent major volume of usage by industry. To get the specifications of quality verification levels dropped, see CGA G-6.2—1973 or contact the Compressed Gas Association.
